

Super-King Size

Measurements for installing EXO Levitating bed supports & illuminated bedside tables

The bed-side table glass should be at approximately the same height as the top of the mattress.

● To avoid any visible wires a pull-through using strong string or wire can be created behind the plasterboard leading to the plug socket to assist with the installation of the 10mm wide LED strips.

Double socket for LED lights placed anywhere between bed supports. Line-up the bottom of the socket with the underside of the bed supports arms - the top of the socket should protrude above the top of the steel supports.
